### The Amazing Plumbing Protection Plan's 14 Point Checklist

1. **Dye test toilets** to identify leaks that could be costing you hundreds of dollars per year in wasted water.
2. **Repair faucet leaks** by tightening loose handles, packing nuts, or valve stems (repairs requiring parts cost extra). Eliminating a 1/32" diameter leak reduces your water bill by more than the annual investment in the Amazing Plumbing Protection Plan.
3. **Check crawlspace for piping leaks** to identify any potential plumbing problems and prevent costly damage.
4. **Check house water pressure** for steady water flow.
5. **Inspect visible piping for leaks and corrosion** to identify potential leaks before they occur.
6. **Check emergency shut-off valve operation** to ensure the valves will be available when needed.
7. **Tag emergency shut-off valves** so you can easily identify the proper valves during a water crisis.
8. **Check washing machine hoses** for material flexibility and integrity, to identify the potential for hose rupture from deterioration.
9. **Clean and inspect free standing gas water heater pilots** to ensure uninterrupted hot water.
10. **Clean and adjust gas water heater burners** to optimize the burn, extending life and reducing energy use.
11. **Inspect exterior hose faucets.** to identify leaks and potential freeze-break issues.
12. **Flush water heater tanks** to remove sediment build-up from your home water system, extend water heater life, and improve water heater recovery and performance.
13. **Soap test gas water heater gas lines** for property and life threatening leaks.
14. **Inspect gas water heater exhaust flues** for leaks that might introduce deadly carbon monoxide to your home.
